

## [New Exams!AZ-103 PDF(Full Version)250Q Download in Braindump2go[Q56-Q66

July/2019 Braindump2go AZ-103 Exam Dumps with PDF and VCE New Updated Today! Following are some new AZ-103 Exam Questions:

1.|2019 Latest Braindump2go AZ-103 Exam Dumps (PDF & VCE) Instant Download:<https://www.braindump2go.com/az-103.html>

2.|2019 Latest Braindump2go AZ-103 Exam Questions & Answers Instant Download:[https://drive.google.com/drive/folders/1deV5Jx0fHUFzZjOR\\_cqSIJh4jqv9NxnC?usp=sharing](https://drive.google.com/drive/folders/1deV5Jx0fHUFzZjOR_cqSIJh4jqv9NxnC?usp=sharing)

**QUESTION 56**Hotspot Question You plan to deploy five virtual machines to a virtual network subnet. Each virtual machine will have a public IP address and a private IP address. Each virtual machine requires the same inbound and outbound security rules. What is the minimum number of network interfaces and network security groups that you require? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point. Answer: Explanation: Box 1: 10 One public and one private network interface for each of the five VMs. Box 2: 1 You can associate zero, or one, network security group to each virtual network subnet and network interface in a virtual machine. The same network security group can be associated to as many subnets and network interfaces as you choose. References: <https://docs.microsoft.com/en-us/azure/virtual-network/security-overview>

**QUESTION 57**Hotspot Question You have an Azure subscription named Subscription1. Subscription1 contains the resources in the following table. In Azure, you create a private DNS zone named adatum.com. You set the registration virtual network to VNet2. The adatum.com zone is configured as shown in the following exhibit. For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point. Answer: Explanation: Box 1: No Azure DNS provides automatic registration of virtual machines from a single virtual network that's linked to a private zone as a registration virtual network. VM5 does not belong to the registration virtual network though. Box 2: No Forward DNS resolution is supported across virtual networks that are linked to the private zone as resolution virtual networks. VM5 does belong to a resolution virtual network. Box 3: Yes VM6 belongs to registration virtual network, and an A (Host) record exists for VM9 in the DNS zone. By default, registration virtual networks also act as resolution virtual networks, in the sense that DNS resolution against the zone works from any of the virtual machines within the registration virtual network. References: <https://docs.microsoft.com/en-us/azure/dns/private-dns-overview>

**QUESTION 58**Hotspot Question You have an Azure subscription named Subscription1. Subscription1 contains a virtual machine named VM1. You install and configure a web server and a DNS server on VM1. VM1 has the effective network security rules shown in the following exhibit. Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
NOTE: Each correct selection is worth one point. Answer: **QUESTION 59**Hotspot Question You have peering configured as shown in the following exhibit. Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
NOTE: Each correct selection is worth one point. Answer: Explanation: Box 1: vNET6 only Box 2: Modify the address space The virtual networks you peer must have non-overlapping IP address spaces. References: <https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-manage-peering#requirements-and-constraints>

**QUESTION 60**Hotspot Question You have an Azure subscription named Subscription1. Subscription1 contains the virtual networks in the following table. Subscription1 contains the virtual machines in the following table: The firewalls on all the virtual machines are configured to allow all ICMP traffic. You add the peerings in the following table. For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point. Answer: **QUESTION 61**Drag and Drop Question You have an Azure Active Directory (Azure AD) tenant that has the initial domain name. You have a domain name of contoso.com registered at a third-party registrar. You need to ensure that you can create Azure AD users that have names containing a suffix of @contoso.com. Which three actions should you perform in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order. Answer: Explanation: The process is simple: Add the custom domain name to your directory Add a DNS entry for the domain name at the domain name registrar Verify the custom domain name in Azure AD References: <https://docs.microsoft.com/en-us/azure/dns/dns-web-sites-custom-domain>

**QUESTION 62**Hotspot Question You have an Azure subscription named Subscription1. Subscription1 contains the resources in the following table. VNet1 is in RG1. VNet2 is in RG2. There is no connectivity between VNet1 and Vnet2. An administrator named Admin1 creates an Azure virtual machine named VM1 in RG1. VM1 uses a disk named Disk1 and connects to VNet1. Admin1 then installs a custom application in VM1. You need to move the custom application to Vnet2. The solution must minimize administrative effort. Which two actions should you perform? To answer, select the appropriate options in the answer area.  
NOTE: Each correct selection is worth one point. Answer: Explanation: You can move a VM and its associated resources to another resource group using the portal. References: <https://docs.microsoft.com/en-us/azure/virtual-machines/windows/move-vm>

**QUESTION 63**Hotspot Question You

have an Azure Active Directory (Azure AD) tenant named adatum.com. Adatum.com contains the groups in the following table. You create two user accounts that are configured as shown in the following table. To which groups do User1 and User2 belong? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. Answer: Explanation: Box 1: Group 1 only First rule applies Box 2: Group 1 and Group 2 only Both membership rules apply. References: <https://docs.microsoft.com/en-us/scm/core/clients/manage/collections/create-collections> QUESTION 64 Hotspot Question Your network contains an Active Directory domain named adatum.com and an Azure Active Directory (Azure AD) tenant named adatum.onmicrosoft.com. Adatum.com contains the user accounts in the following table. Adatum.onmicrosoft.com contains the user accounts in the following table. You need to implement Azure AD Connect. The solution must follow the principle of least privilege. Which user accounts should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. Answer: Explanation: Box 1: User5 In Express settings, the installation wizard asks for the following: AD DS Enterprise Administrator credentials Azure AD Global Administrator credentials The AD DS Enterprise Admin account is used to configure your on-premises Active Directory. These credentials are only used during the installation and are not used after the installation has completed. The Enterprise Admin, not the Domain Admin should make sure the permissions in Active Directory can be set in all domains. Box 2: UserA Azure AD Global Admin credentials are only used during the installation and are not used after the installation has completed. It is used to create the Azure AD Connector account used for synchronizing changes to Azure AD. The account also enables sync as a feature in Azure AD. References: <https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnect-accounts-permissions> Case Study 1 - Humongous Insurance (QUESTION 65 - QUESTION 72) Overview Humongous Insurance is an insurance company that has three offices in Miami, Tokyo and Bangkok. Each office has 5,000 users. Existing Environment Active Directory Environment Humongous Insurance has a single-domain Active Directory forest named humongousinsurance.com. The functional level of the forest is Windows Server 2012. You recently provisioned an Azure Active Directory (Azure AD) tenant. Network Infrastructure Each office has a local data center that contains all the servers for that office. Each office has a dedicated connection to the Internet. Each office has several link load balancers that provide access to the servers. Active Directory Issue Several users in humongousinsurance.com have UPNs that contain special characters. You suspect that some of the characters are unsupported in Azure AD. Licensing Issue You attempt to assign a license in Azure to several users and receive the following error message: "Licenses not assigned. License agreement failed for one user." You verify that the Azure subscription has the available licenses. Requirements Planned Changes Humongous Insurance plans to open a new office in Paris. The Paris office will contain 1,000 users who will be hired during the next 12 months. All the resources used by the Paris office users will be hosted in Azure. Planned Azure AD Infrastructure The on-premises Active Directory domain will be synchronized to Azure AD. All client computers in the Paris office will be joined to an Azure AD domain. Planned Azure Networking Infrastructure You plan to create the following networking resources in a resource group named All\_Resources: - Default Azure system routes that will be the only routes used to route traffic - A virtual network named Paris-VNet that will contain two subnets named Subnet1 and Subnet2 - A virtual network named ClientResources-VNet that will contain one subnet named ClientSubnet - A virtual network named AllOffices-VNet that will contain two subnets named Subnet3 and Subnet4 You plan to enable peering between Paris-VNet and AllOffices-VNet. You will enable the Use remote gateways setting for the Paris-VNet peerings. You plan to create a private DNS zone named humongousinsurance.local and set the registration network to the ClientResources-VNet virtual network. Planned Azure Computer Infrastructure Each subnet will contain several virtual machines that will run either Windows Server 2012 R2, Windows Server 2016, or Red Hat Linux. Department Requirements Humongous Insurance identifies the following requirements for the company's departments: - Web administrators will deploy Azure web apps for the marketing department. Each web app will be added to a separate resource group. The initial configuration of the web apps will be identical. The web administrators have permission to deploy web apps to resource groups. - During the testing phase, auditors in the finance department must be able to review all Azure costs from the past week. Authentication Requirements Users in the Miami office must use Azure Active Directory Seamless Single Sign-on (Azure AD Seamless SSO) when accessing resources in Azure. QUESTION 65 You need to resolve the licensing issue before you attempt to assign the license again. What should you do? A. From the Groups blade, invite the user accounts to a new group. B. From the Profile blade, modify the usage location. C. From the Directory role blade, modify the directory role. Answer: B Explanation: License cannot be assigned to a user without a usage location specified. Scenario: Licensing Issue You attempt to assign a license in Azure to several users and receive the following error message: "Licenses not assigned. License agreement failed for one user." You verify that the Azure subscription has the available licenses. QUESTION 66 Which blade should you instruct the finance department auditors to use? A. Partner information B. Overview C. Payment methods D. Invoices Answer: D Explanation: You can opt in and configure additional recipients to receive your Azure invoice in an email. This feature may not be

available for certain subscriptions such as support offers, Enterprise Agreements, or Azure in Open. Select your subscription from the Subscriptions page. Opt-in for each subscription you own. Click Invoices then Email my invoice. Click Opt in and accept the terms. Scenario: During the testing phase, auditors in the finance department must be able to review all Azure costs from the past week.
